

# The forestry mower robust and strong

*A strong hood and (closed) hydraulic folding front*

*The back of the forestry mower has a heavy chain guard for safety*

*The hydraulic folding front can be opened, as shown here, to feed tall shrubs in more easily*

*Close-up of rotor shaft with teeth*

**The forestry mower is particularly suitable for mowing rough overgrowth such as brush, shrubs and small to medium-sized tree stumps.**

The Herder forestry mower has a robust construction and therefore is highly suited for to heavy work. This mower comes as standard with a heavy hydraulic folding front, so that tall shrubs can be fed in easily. The back of the forestry mower has a heavy chain guard for safety. The hydraulic motor is also protected by a very sturdy guard. The forestry mower comes with rotatable teeth. You can rotate these teeth three times, which triples their service life. This makes the tool extremely economical to use.
